

# Chinese VLBI Network and its application to eVLBI

Zhong Chen  
**Shanghai Astronomical Observatory**  
**Chinese VLBI Team**

The 8th International e-VLBI Workshop  
22-26 June 2009 - Madrid, Spain

# Outline

## 1. Chinese VLBI Network

- a) – History
- b) – Stations
- c) – VLBI Center at Shanghai

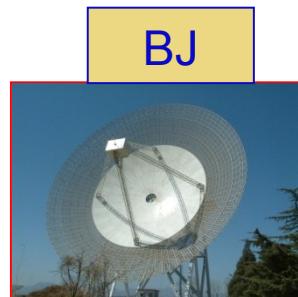

## 2. eVLBI Application

- a) – Science
- b) – CE-1 Lunar Satellite Tracking Mission
- c) – YH-1, CE-2, CE-3,
- d) – Demos
- e) – future plan

# CVN—History

上海天文台  
Shanghai Astronomical Observatory

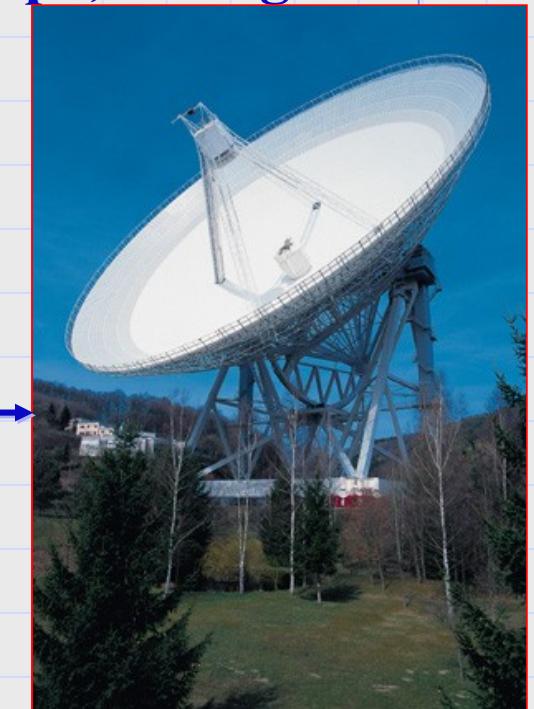

We started VLBI research leaded by Madam Ye in 1970s.  
**First VLBI Experiment between Shanghai and Effelsberg**

- ❖ 1981 Completion of the construction of a 6m radio telescope in SHAO
- ❖ Carried out the first trans-Eurasian continent VLBI experiment at L-band between 6m telescope, Shanghai and 100m telescope, Effelsberg,  
West Germany, November, 1981.

**Effelsberg 100m**

**Shanghai 6m**

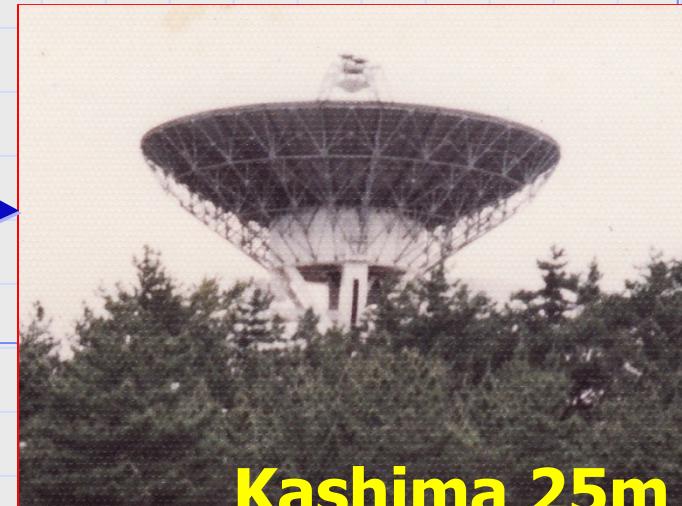

## VLBI Experiments between Shanghai and Kashima

1984/5 Two VLBI experiments at X-band between 6m telescope Shanghai and 26m telescope,Kashima were performed in 1984/1985. The accuracy of the baseline measurements is about a few centimeters.

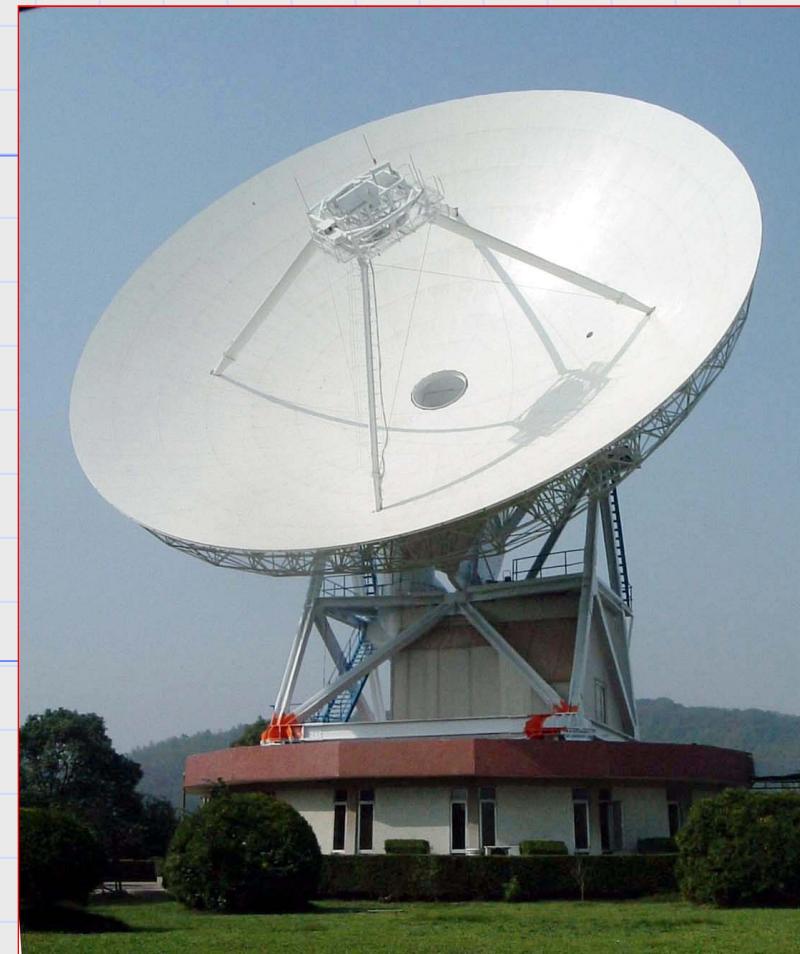

Shanghai 6m

Kashima 25m

The 25m antenna was installed in Sheshan site, about 30km far away from Shanghai in 1986/1987 and started routine international VLBI experiments since November, 1987.

Diameter: 25m

Band: L, S/X, C, K (22GHz)

Recording system: MK2, S2, MK3, MK4, CVNHD

Mk5A, Mk5B, DBBC

Member of EVN, IVS

# CVN—Urumqi station

November, 1993

**Diameter:25m**

**Band: P, L, S/X, C, K(22GHz) ,  
also 30 and 49 cm**

**Recording system: MK2, MK3, MK4,**

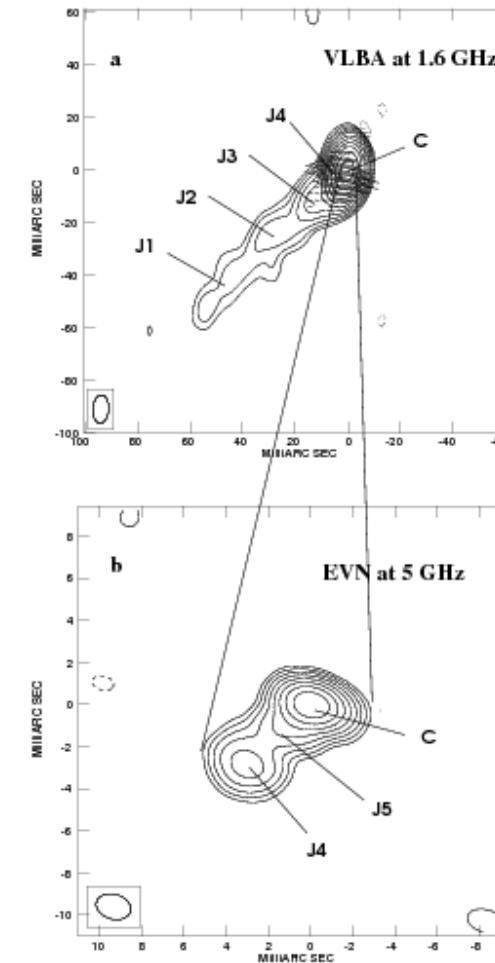

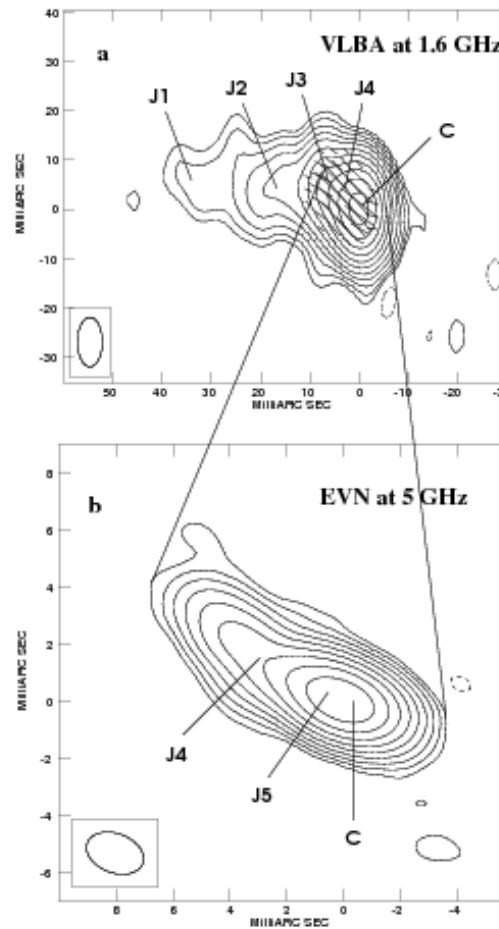

**K-4 , K-5, CVNHD,Mk5A ,Mk5B,DBBC**

**Member of EVN , IVS**

# Sheshan and Urumqi both are the member of EVN and IVS

## Mobile VLBI

A Mobile VLBI System with 3m antenna was constructed by SHAO for the Xi'an Surveying and Mapping Institute in 2000 which is located in the Yunnan Astronomical Observatory.

# CVN - Kunming station

Antenna Construction

Started at 2005.6

Ended at 2006.5.21

# The Kunming 40-m Radio Telescope

Diameter: 40m

Band : S/X

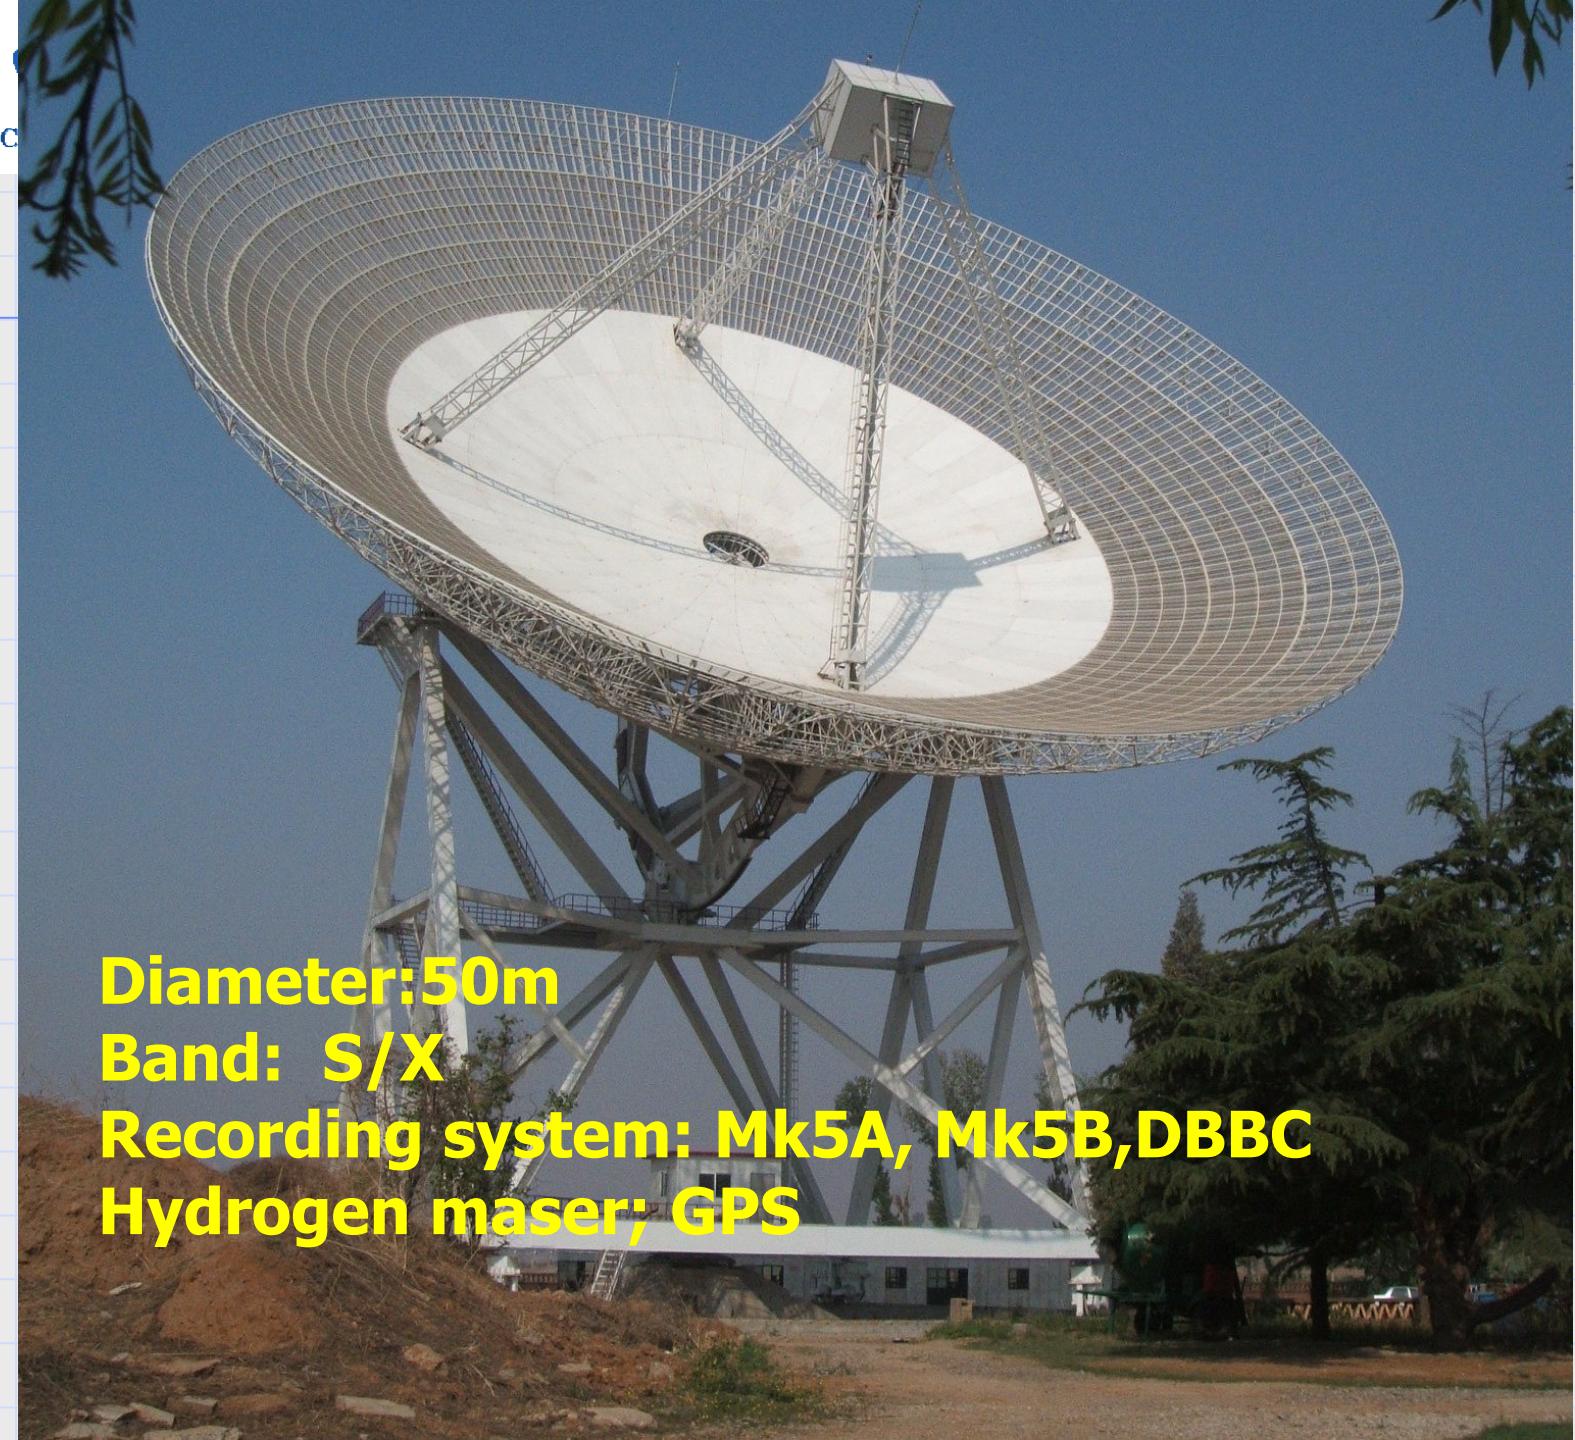

Recording system: Mk5A,Mk5B,DBBC, Hydrogen maser;  
GPS

# CVN – Beijing Station

**Diameter:50m**

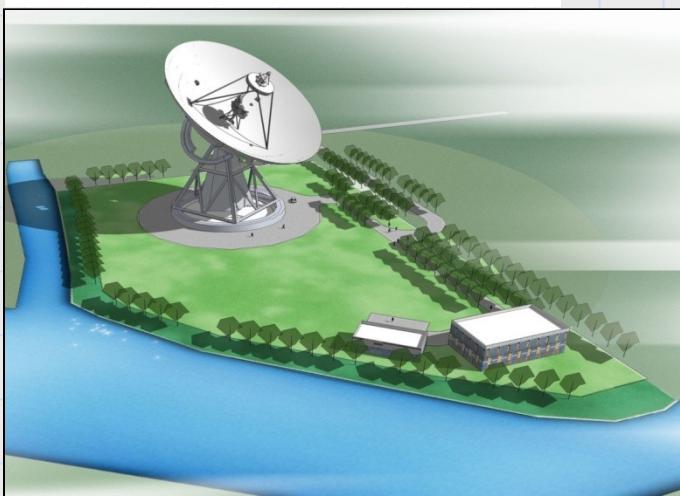

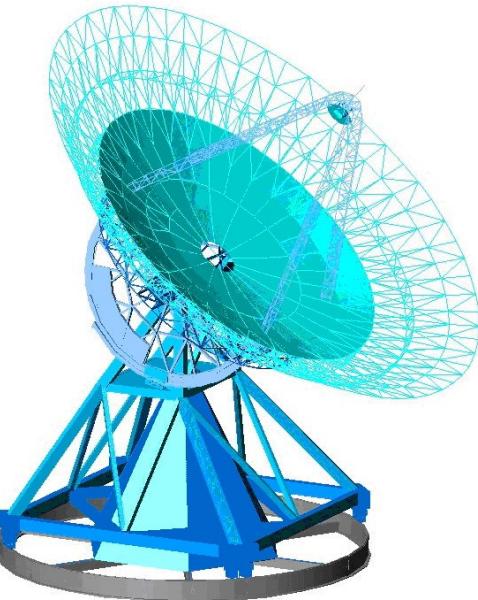

**Band: S/X**

**Recording system: Mk5A, Mk5B, DBBC**

**Hydrogen maser; GPS**

# New telescope in Shanghai

- ◆ Diameter: 65m
- ◆ Bands: 8 bands

band	wavelength ( cm )	Bandwidth ( GHz )	Pol.
L	21/18	1.30~1.75	dual
S	13	2.20~2.45	dual
C	6/5	4.50~7.00	dual
X	3.6	8.00~9.00	dual
Ku	2.5/2.0	12.00~15.00	dual
K	1.35	21.00~24.00	dual
Ka	0.9	30.00~34.00	dual
Q	0.7	40.00~46.00	dual

S/X , X/Ka

16

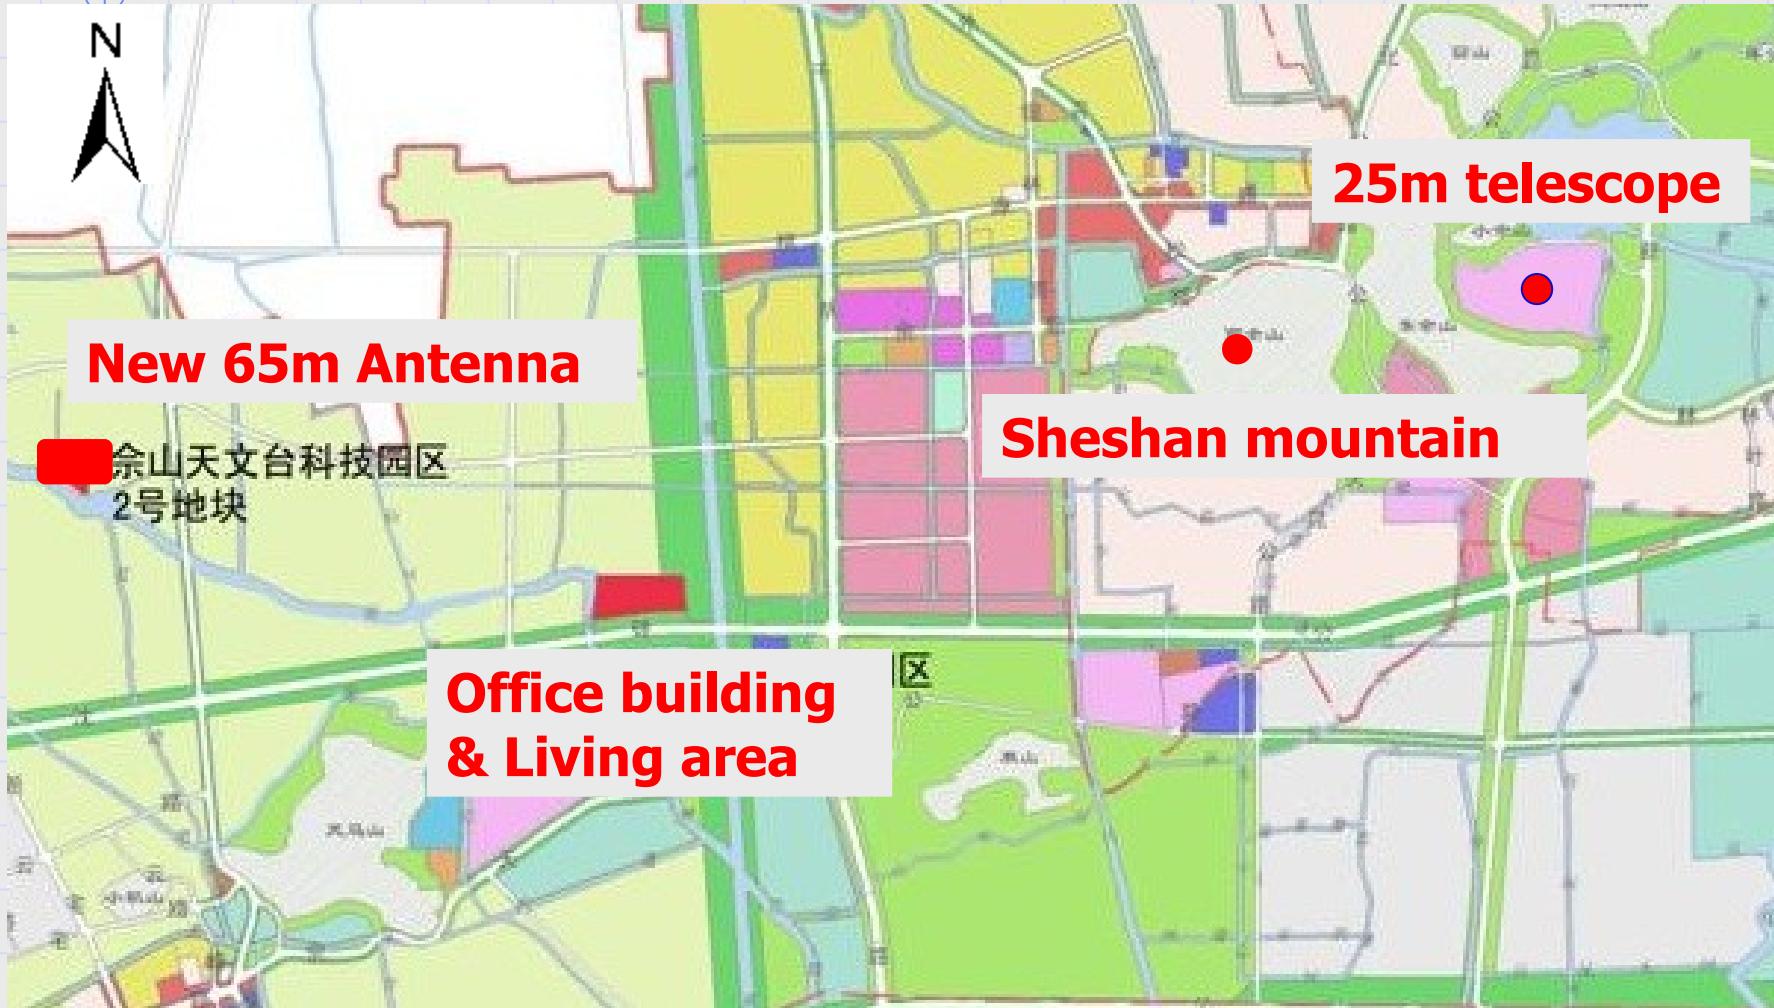

# Applications of 65m telescope

- ◆ Astrophysics research with single dish, special for some spectral lines.
- ◆ Astrophysics research with VLBI.
- ◆ Astrometry research with VLBI.
- ◆ Applications for space projects.

# Location

比例尺: 0 200 400 800 2000m

# Construction

- ◆ Shanghai government offers us a land about 150X400 m
- ◆ The new telescope will be supported jointly by Shanghai government and Chinese Academy of Sciences.
- ◆ The new telescope should be ready in 2012.
- ◆ Manufacturer choosed, Under designing now

# NAO's FAST for VLBI

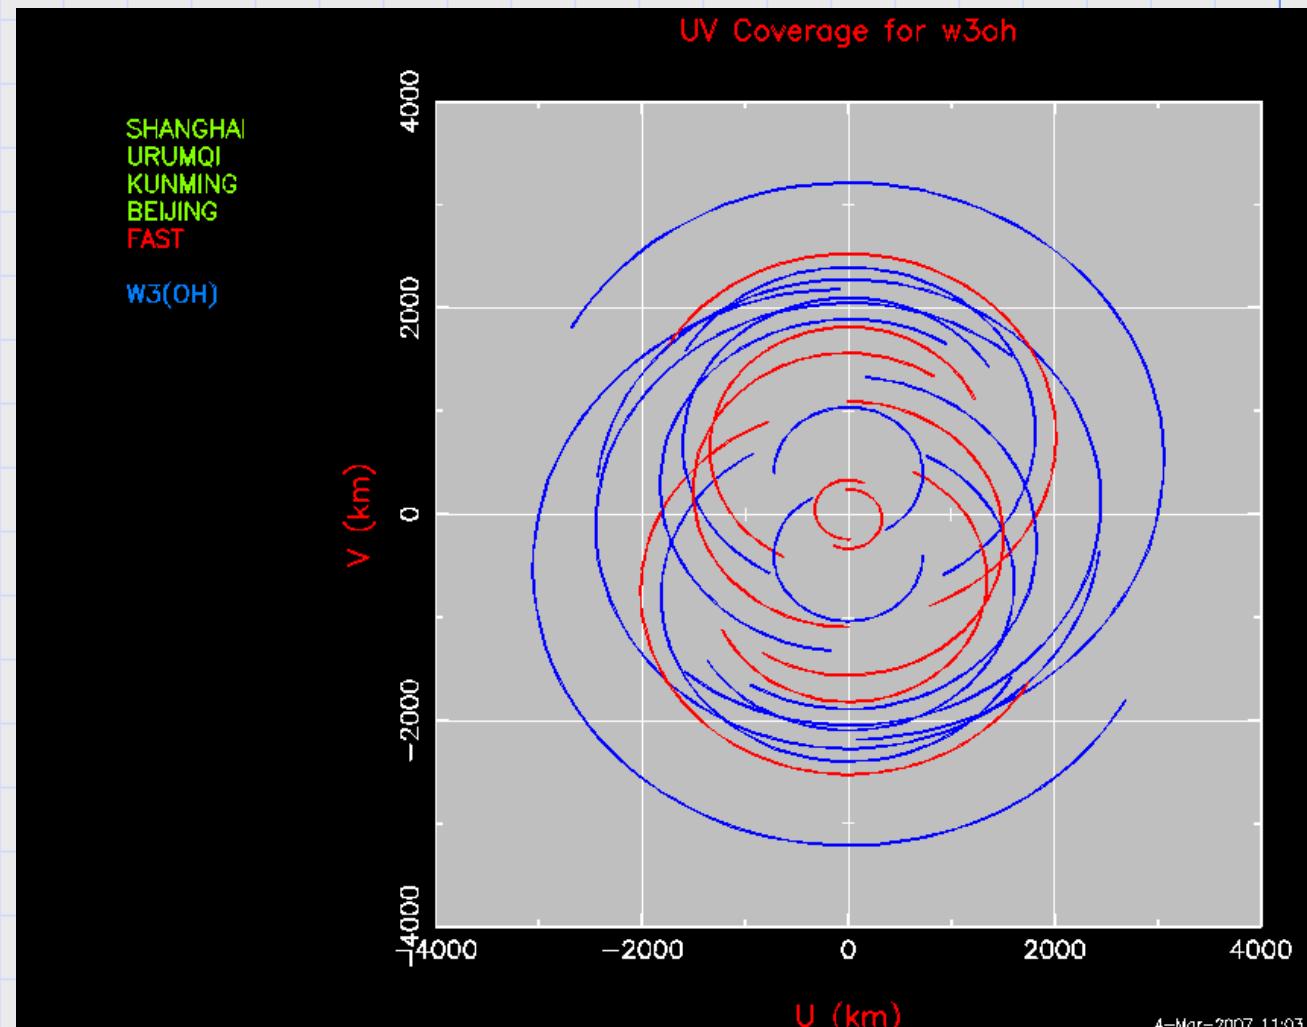

- ◆ Diamter:500m
- ◆ 70 MHz – 3 GHz
- ◆ Extending to 8 GHz
- ◆ Location:  
Guizhou province,  
South of China  
karst landform

## 5 stations uv coverage

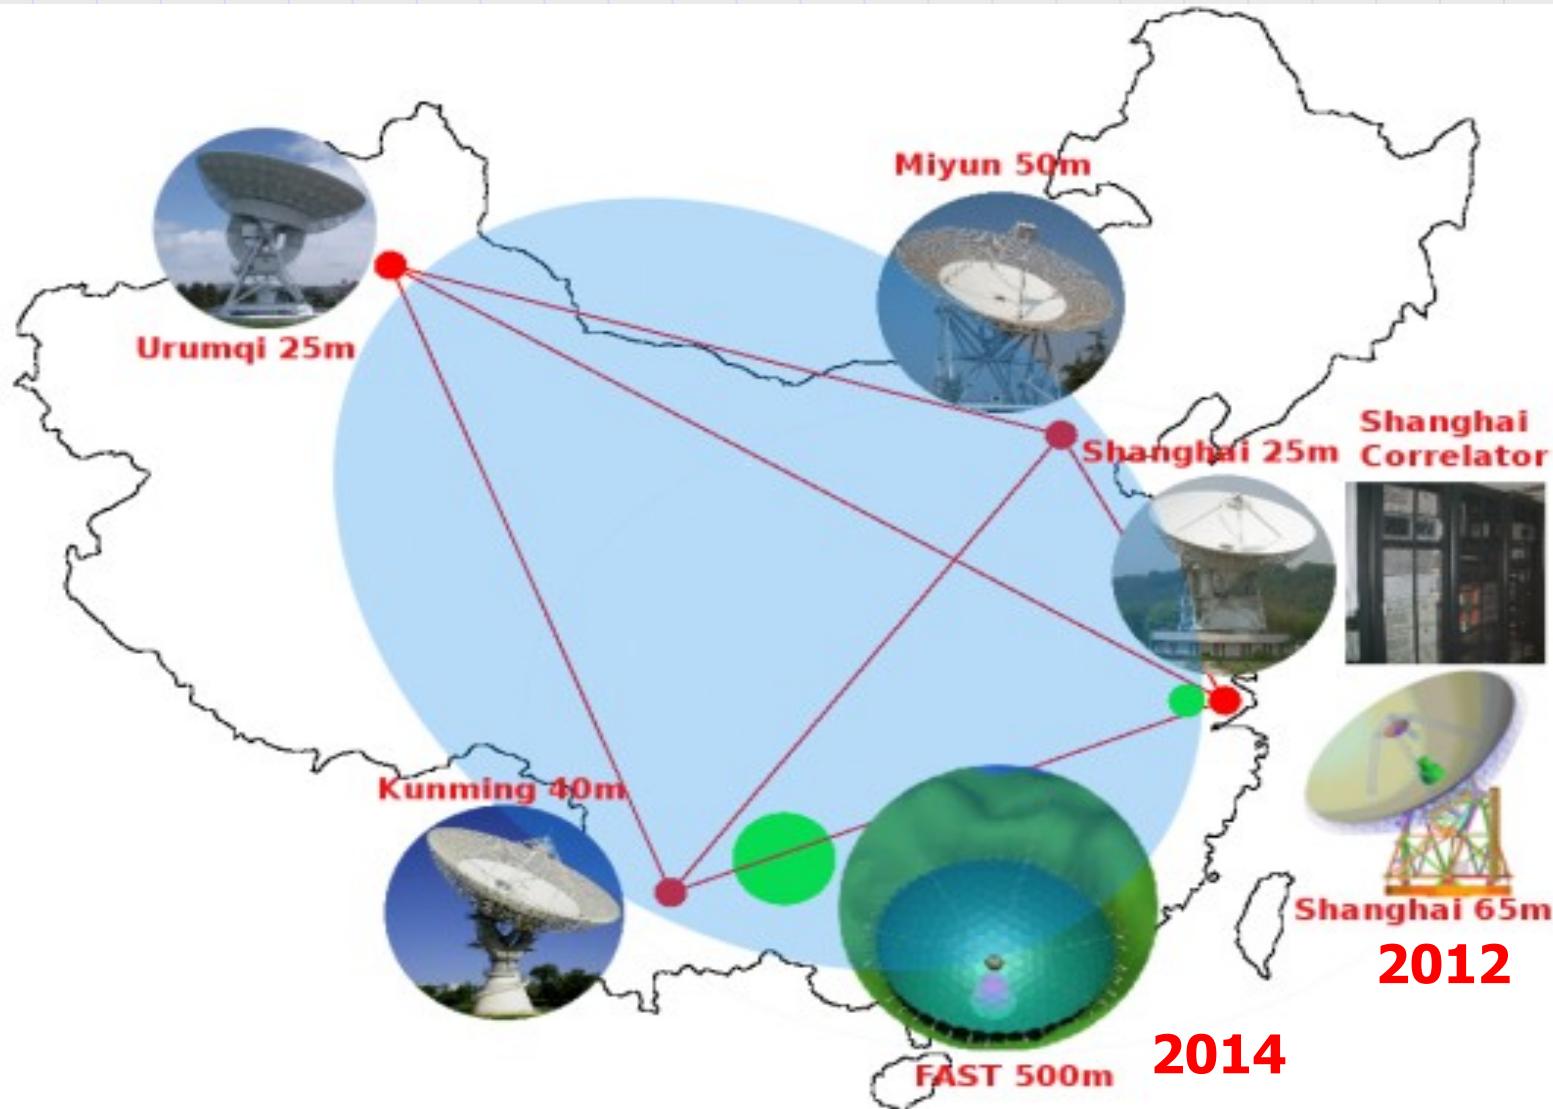

- ◆ Shanghai
- ◆ Urumqi
- ◆ Kunming
- ◆ Beijing
- ◆ FAST

# Future VLBI Network in China

# Space mm-VLBI array

- ◆ SMVA  
( Space mm VLBI Array)
- ◆ 4-6 antennas
- ◆ ~ 20 GHz- ~ THz

# CVN -- VLBI data processing center

**Hardware correlator (5 stations)**

**Software correlator (5~10 stations)**

**Output data: CE-1 format**

**FITS format (will be available)**

**Correlators for CE-1 data processing  
(near real time eVLBI, demand in 10 min,  
actually in 5 min.)**

# ShAO VLBI Center

## ◆ Hardware Correlator

- **5 Stations FX Correlator ( 5 stations, 8 IFs )**
- **Maximum data rate : 256Mbps (8 channels)**
- **Input data format: MKIV, MKV**
- **Data source : Disk Array, Network**
- **Output: network and disk files**
- **CE-1 specified**

# ShAO VLBI Center

## ◆ Software Correlator

Correlation station number	1~10
IF number	1~16
FFT points/ IF	32 ~65536/IF
Integration period	0.1~60 second
Input data format	Mark5A(1:1, 1:2, 1:4 fanout)
Sampling	1bit, 2 bit
Output data format	CVN (one-minute based)
Fringe search	2-4 stations
Correlation speed	>128Mbps/station (4 stations, 1024/IF)
Data latency	< 3 minutes
PCAL detection	Yes

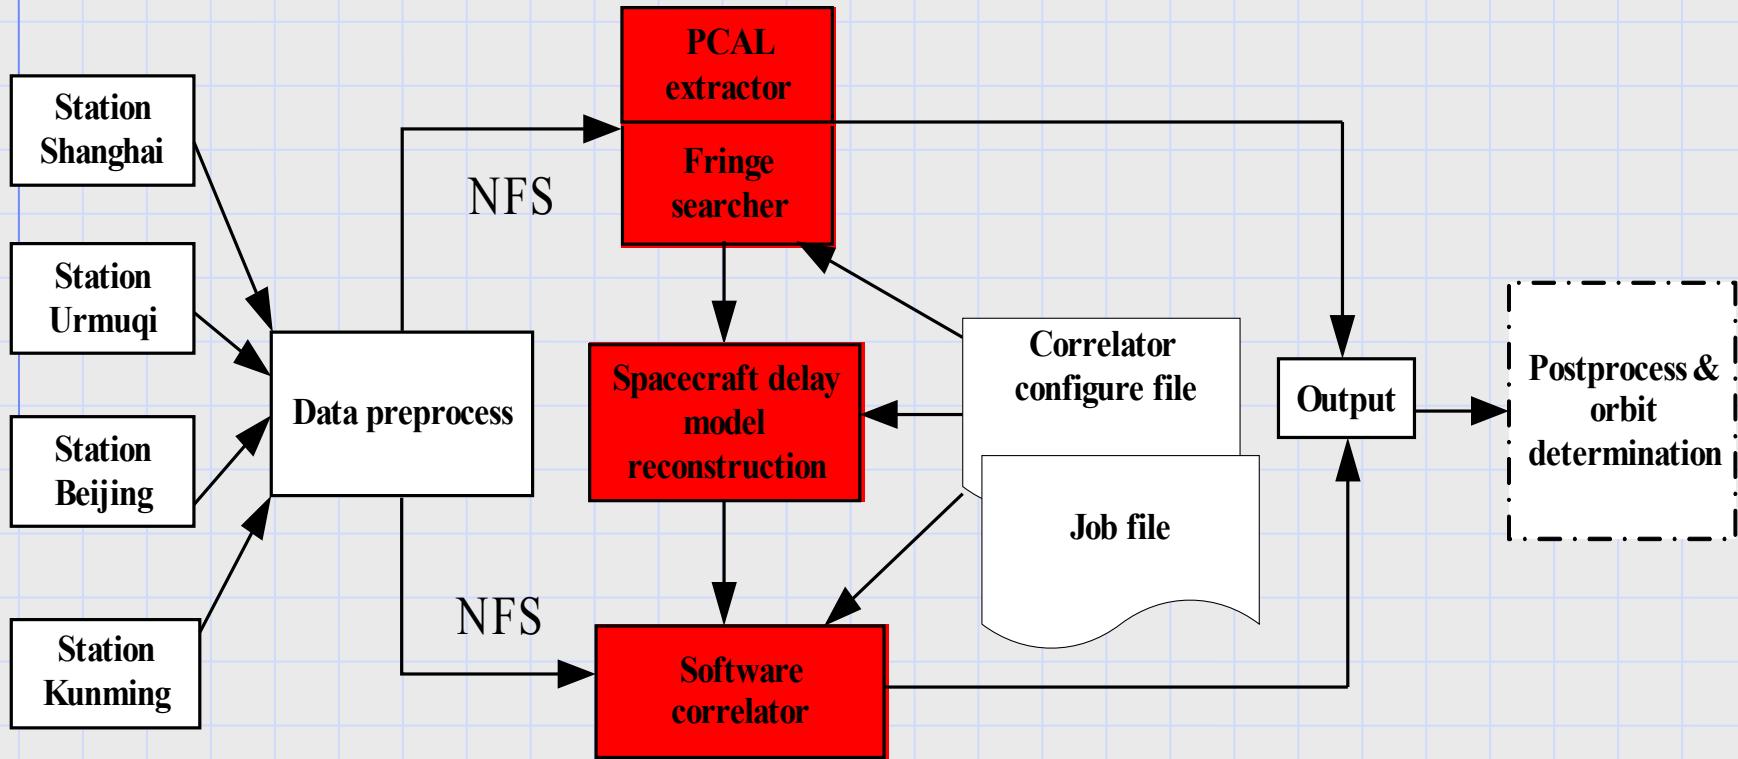

- Near real time correlation ability (< 3 min)**
- Special functions:**
  1. **Fast satellite fringe search and model reconstruction**
  2. **Full PCAL detection ability, CE-1 mode**
    - 8 PCALs, 4-channel, BW=2MHz/channel**
    - 64PCALs, 8-channel, BW=8MHz/channel**
- Correlation speed:**

**128Mbps/station, 2bit sample, 4 stations,  
on 16-CPU core server**

# Block diagram

One-minute based

NFS: Network File System

# DBBC

## ◆ Characteristics

- Four IFs input

Bandwidth: 512MHz/IF , 1024MHz/IF is possible

- Two MK4 interface output to MK4 formatter
- Two VSI interface to MK5B<sup>+</sup> / MK5C Disk Array
- 10Gbps network connect in plan
- 16/32 channels , 0.5/1/2/4/8/16MHz / ch, 1/2/4 bits/ch
- Frequency resolution : 1Hz / step
- Full compatible FS interface of traditional DAQ (H&S)
- PCAL and auto-spectrum output

# DBBC

## ◆ Characteristics

- Two channel DAC for channel output signal monitor
- Download different FPGA-Core :
  - ◆ compatible with DBE
  - ◆ compatible with DBBC
  - ◆ Different BBC with different band width in same observation time for tracking requirement

( $\triangle$ DOR  $\triangle$ DOD SBI phase reference mode)

## ◆ Installed at all 4 CVN stations:

SH,BJ,KM,UR as testbed.

## ◆ Add 10Gbps network interface in plan

CVN

Technical development

correllator: more stations, 10?

more flexible

FITS format:

digital BBC:

Astronomy application

C band may be possible for BJ and KM in near future?

# CVN for Sciences

## 4 stations VLBI Network

1 ) **13/3.6 cm (s/x) geodesy , AGN**

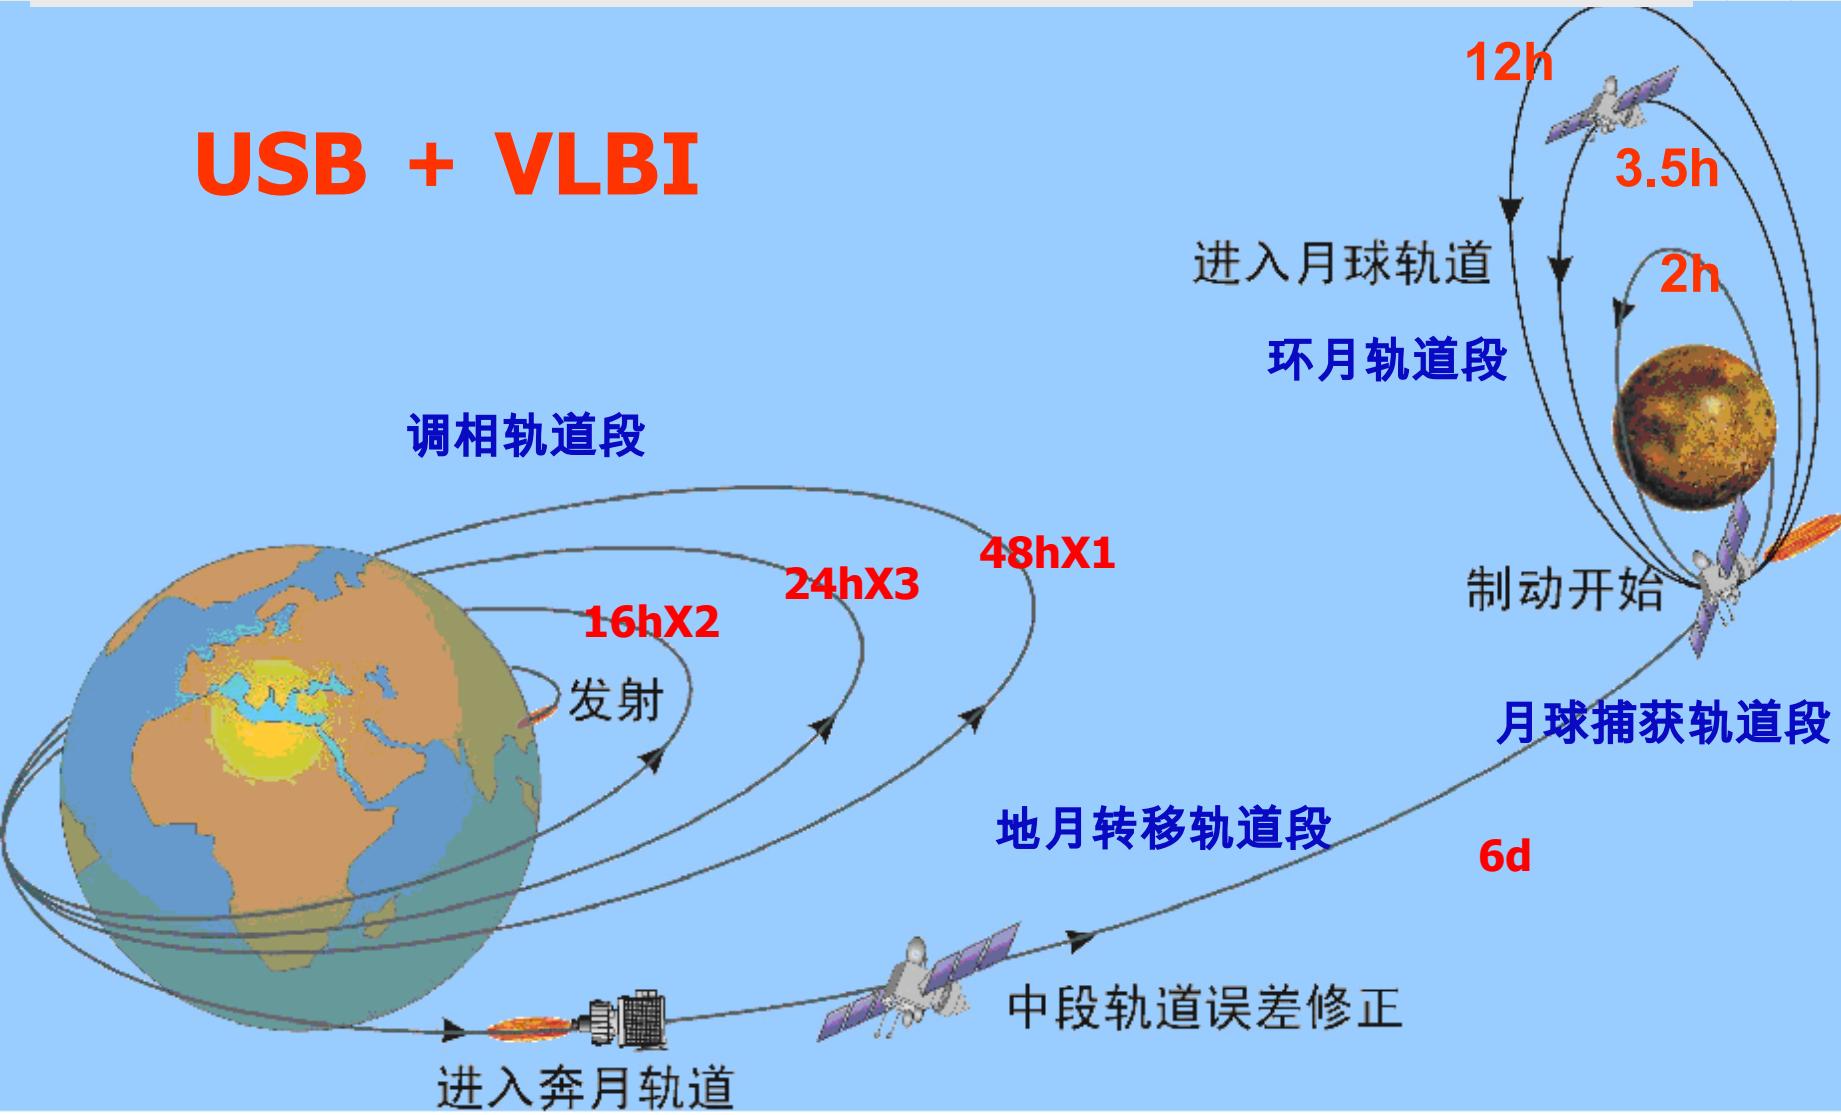

2 ) **6 cm ( C ) 4.2-7.7 GHz**  
**AGN , Pulsar , CH<sub>3</sub>OH**

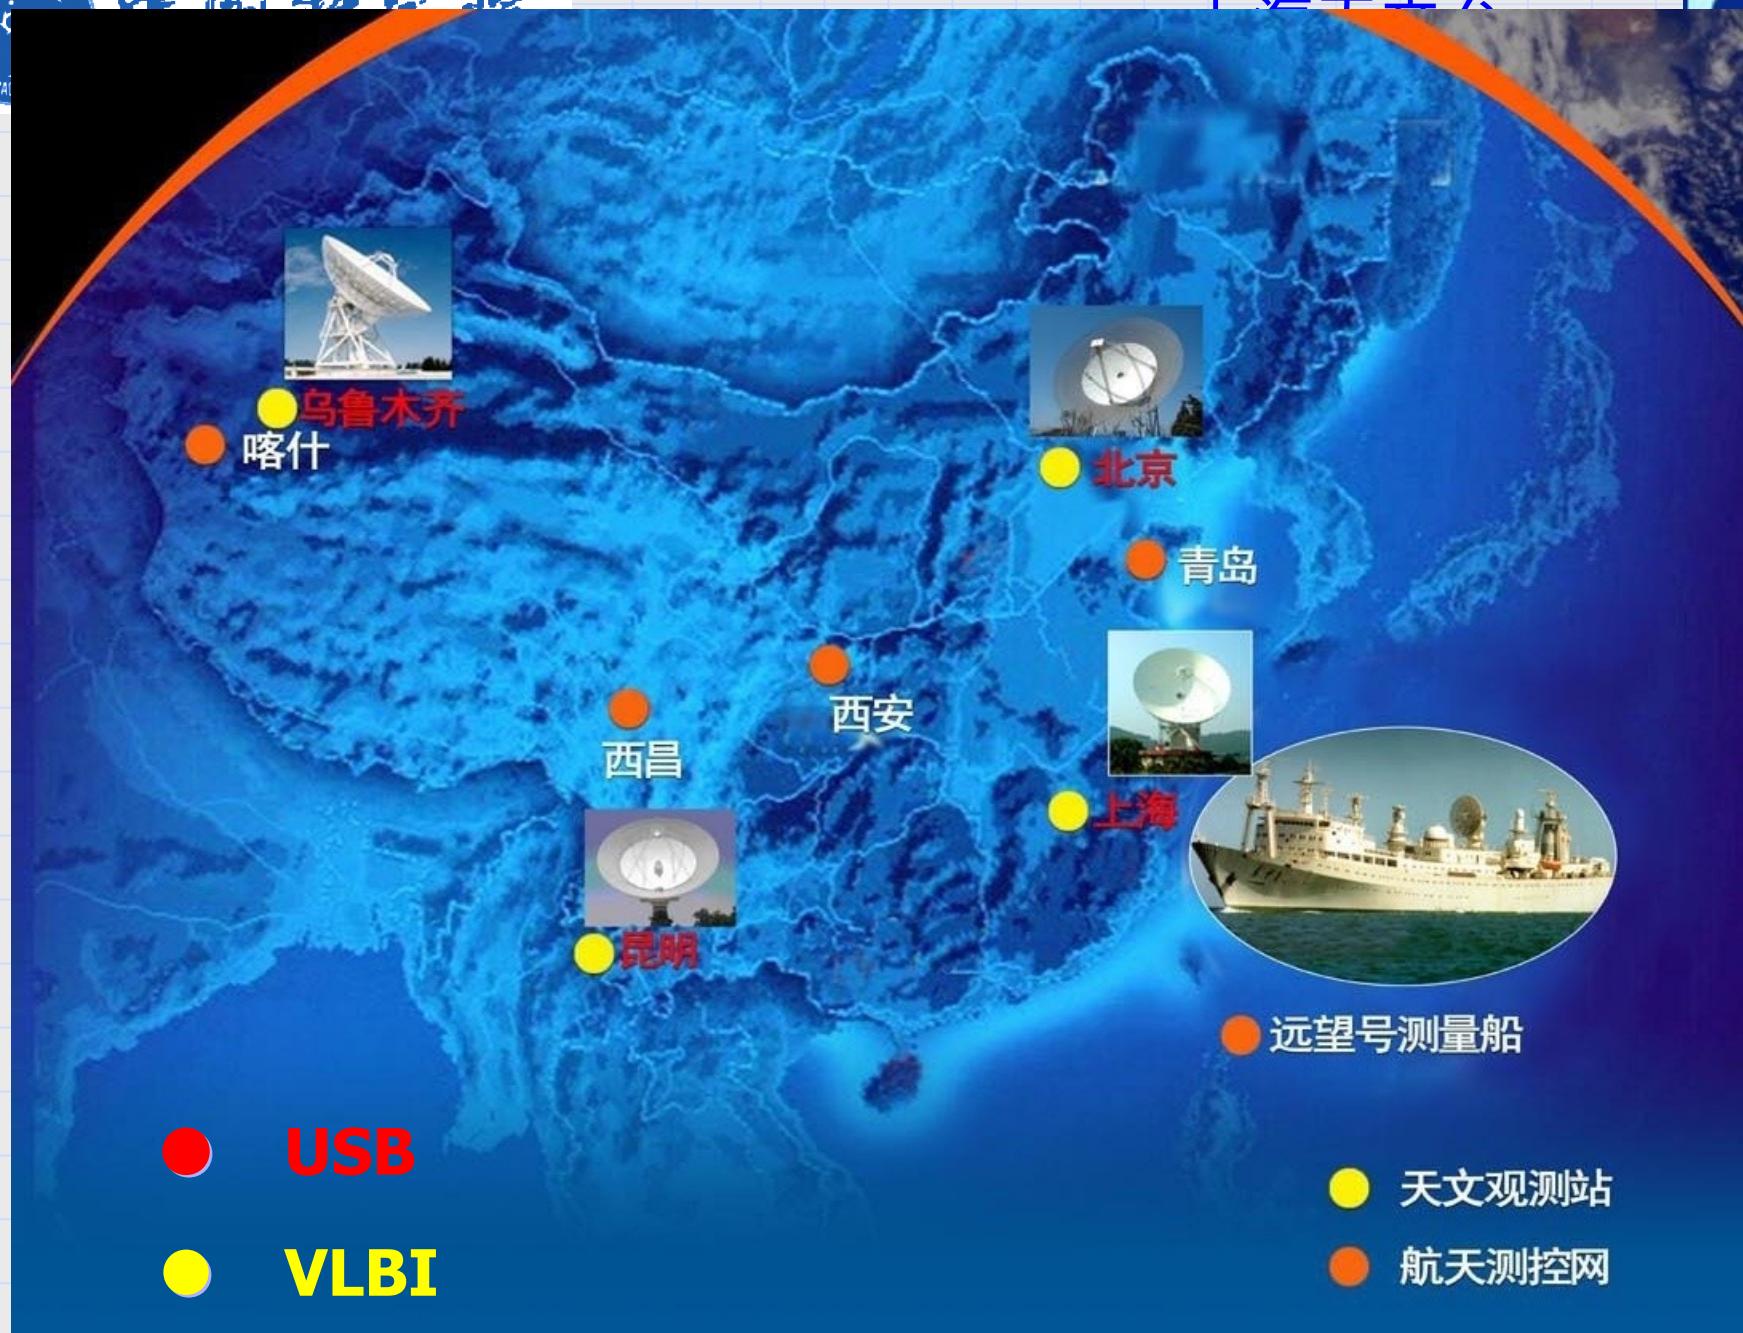

3 ) **18 、 20 cm ( L ) AGN , Pulsar , OH**

# CE-1 Tracking

- ◆ Orbit determination: USB+VLBI
- ◆ VLBI tracking

distance > 20000km

elevation > 5 degree

output data: baseline delay

baseline rate

angular position

output delay time: < 10minutes

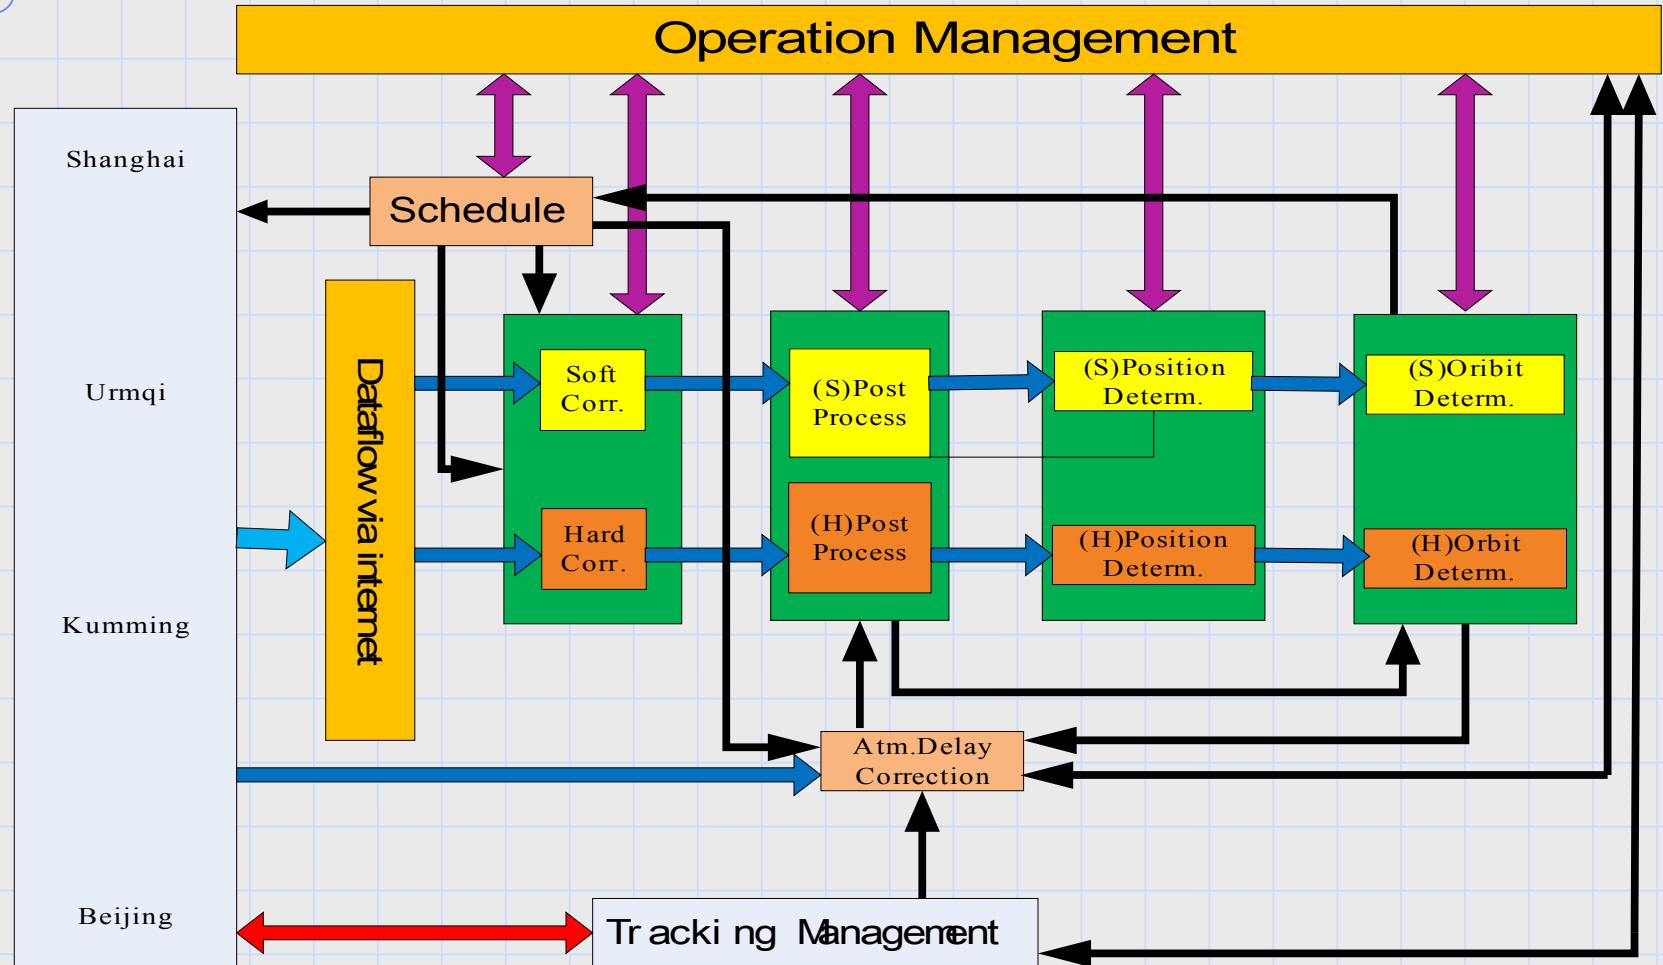

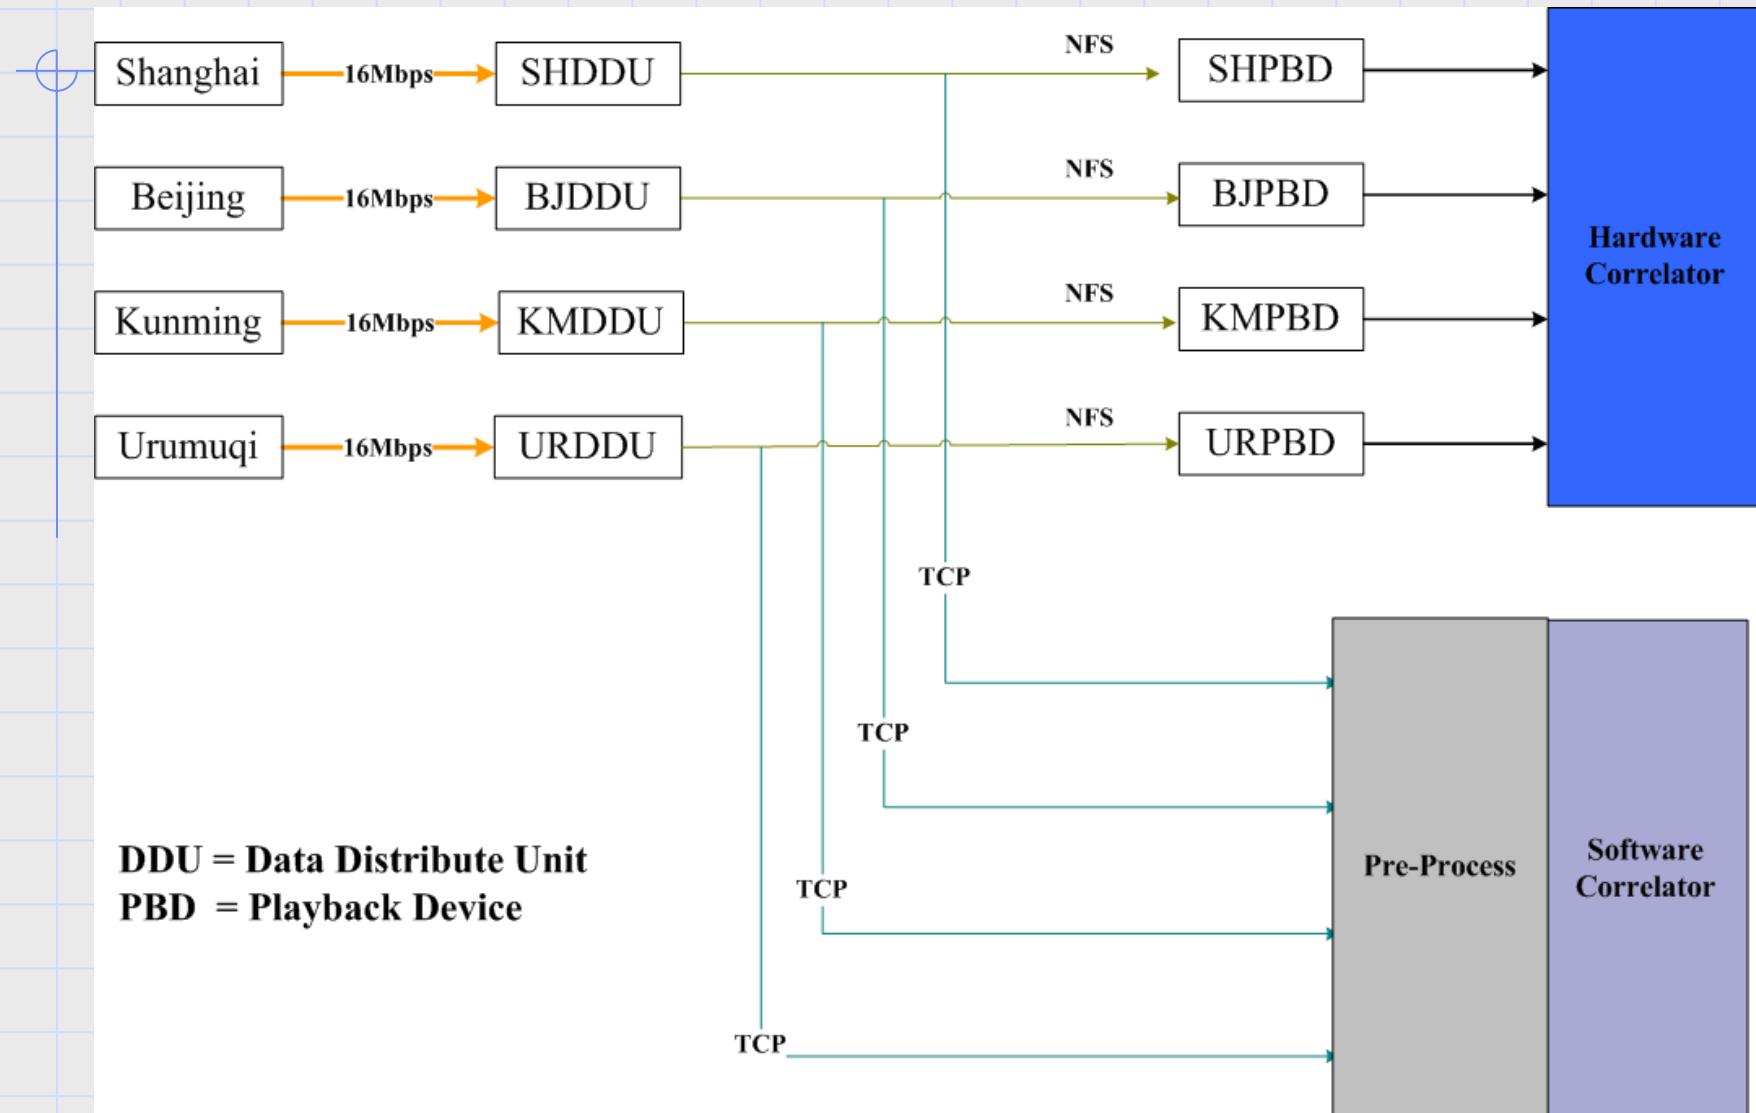

◆ correction for the clock and instruments delay:  
Quasars observation

◆ Correction for atmospheric effect:  
GPS & station weather parameters

# Software correlator + hardware correlator

## CE-1 Track activites

- ◆ 27 Oct.– 30 Nov. 2007
  - near real time mode tracking, 16Mbps
- ◆ From Dec.2007: 2 days/week
  - recorded in the Mark5A disks, 128Mbps
  - output data : two weeks late
- ◆ 1 March, 2009:
  - Hit on the moon, sucessfully ended mission
  - ftp fringe check -> disk recorded

## Angle position of CE-1 in moon impact

## VLBI in CE-1 project

- Reliable, flexible, Important in CE-1
- Processed 1006.9 hours data
- Critical flying mission
  - 36 near-real time experiments, 336.55 hours sent out 336.55 hours
- Long-term in-orbit operation
  - 113 experiments, 670.35 hours sent out 434.02 hours
- ✓ Including real-time CE-1 maneuver tracking
- ✓ Geodesy (CVN station position)

# Space exploration missions

- ◆ YH-1 Oct, 2010 (Mars explorer)  
Sino-Russian, Disk-based
- ◆ CE-2 2012, orbiting  
Near Real-time tracking, like CE-1
- ◆ CE-3 2013, 2014 landing  
Real-time, 128Mbps

## eVLBI Demo

First e-VLBI data from China-Australia, China-Europe and Australia-Europe baselines in the Oct. of 2007

# Demo

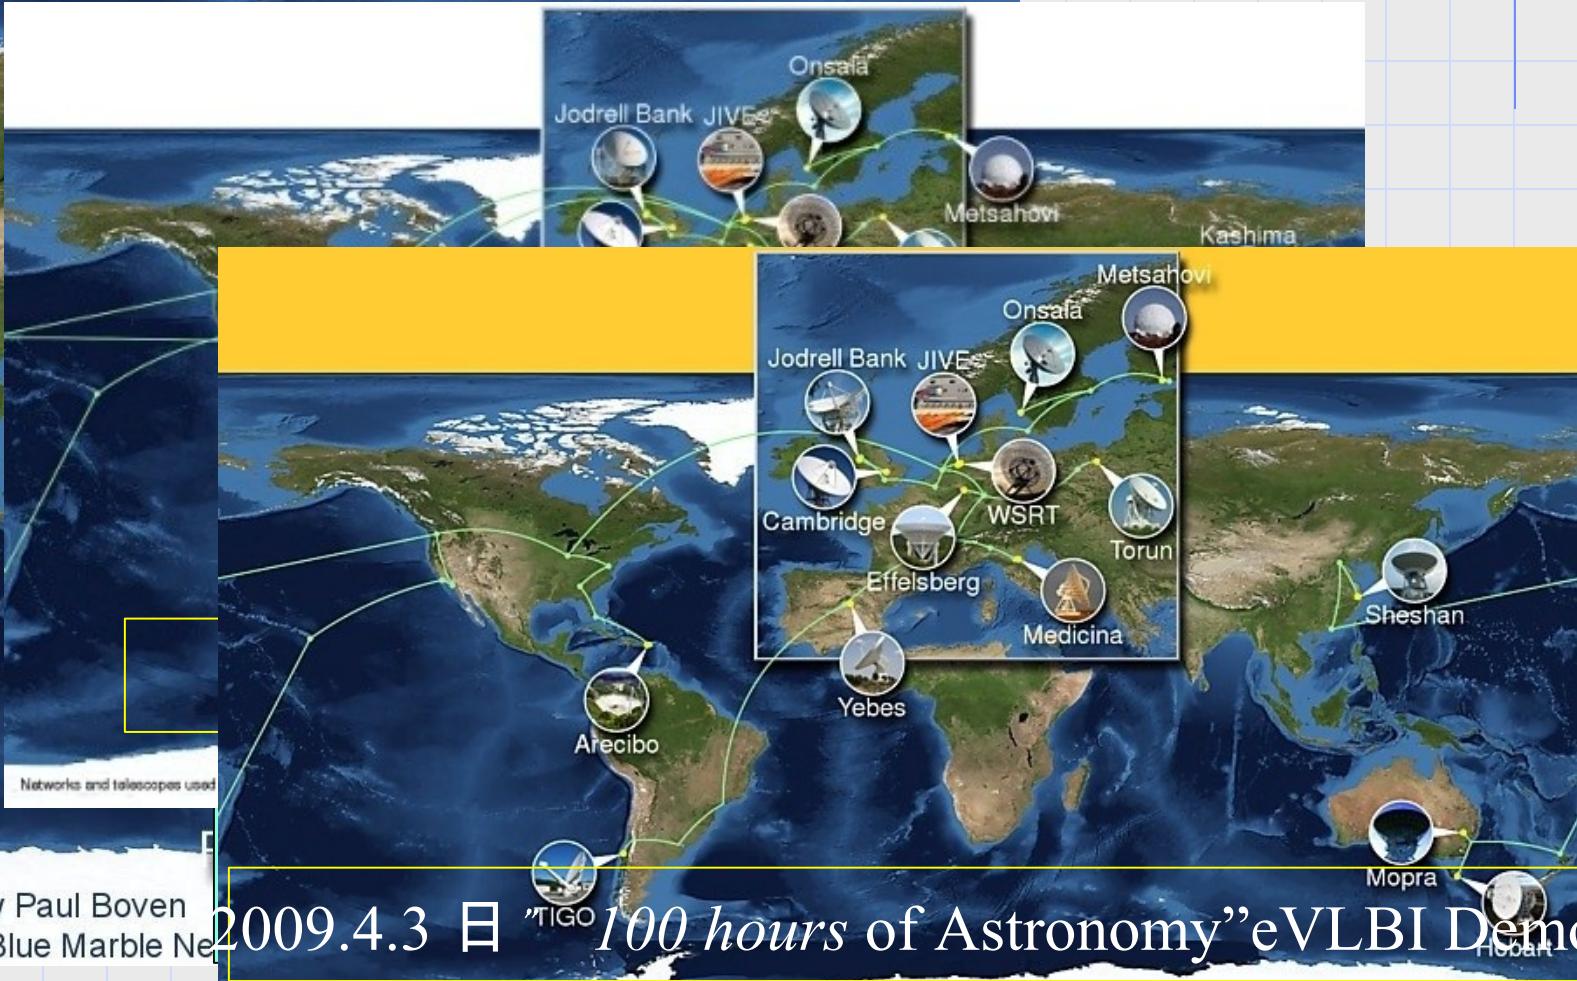

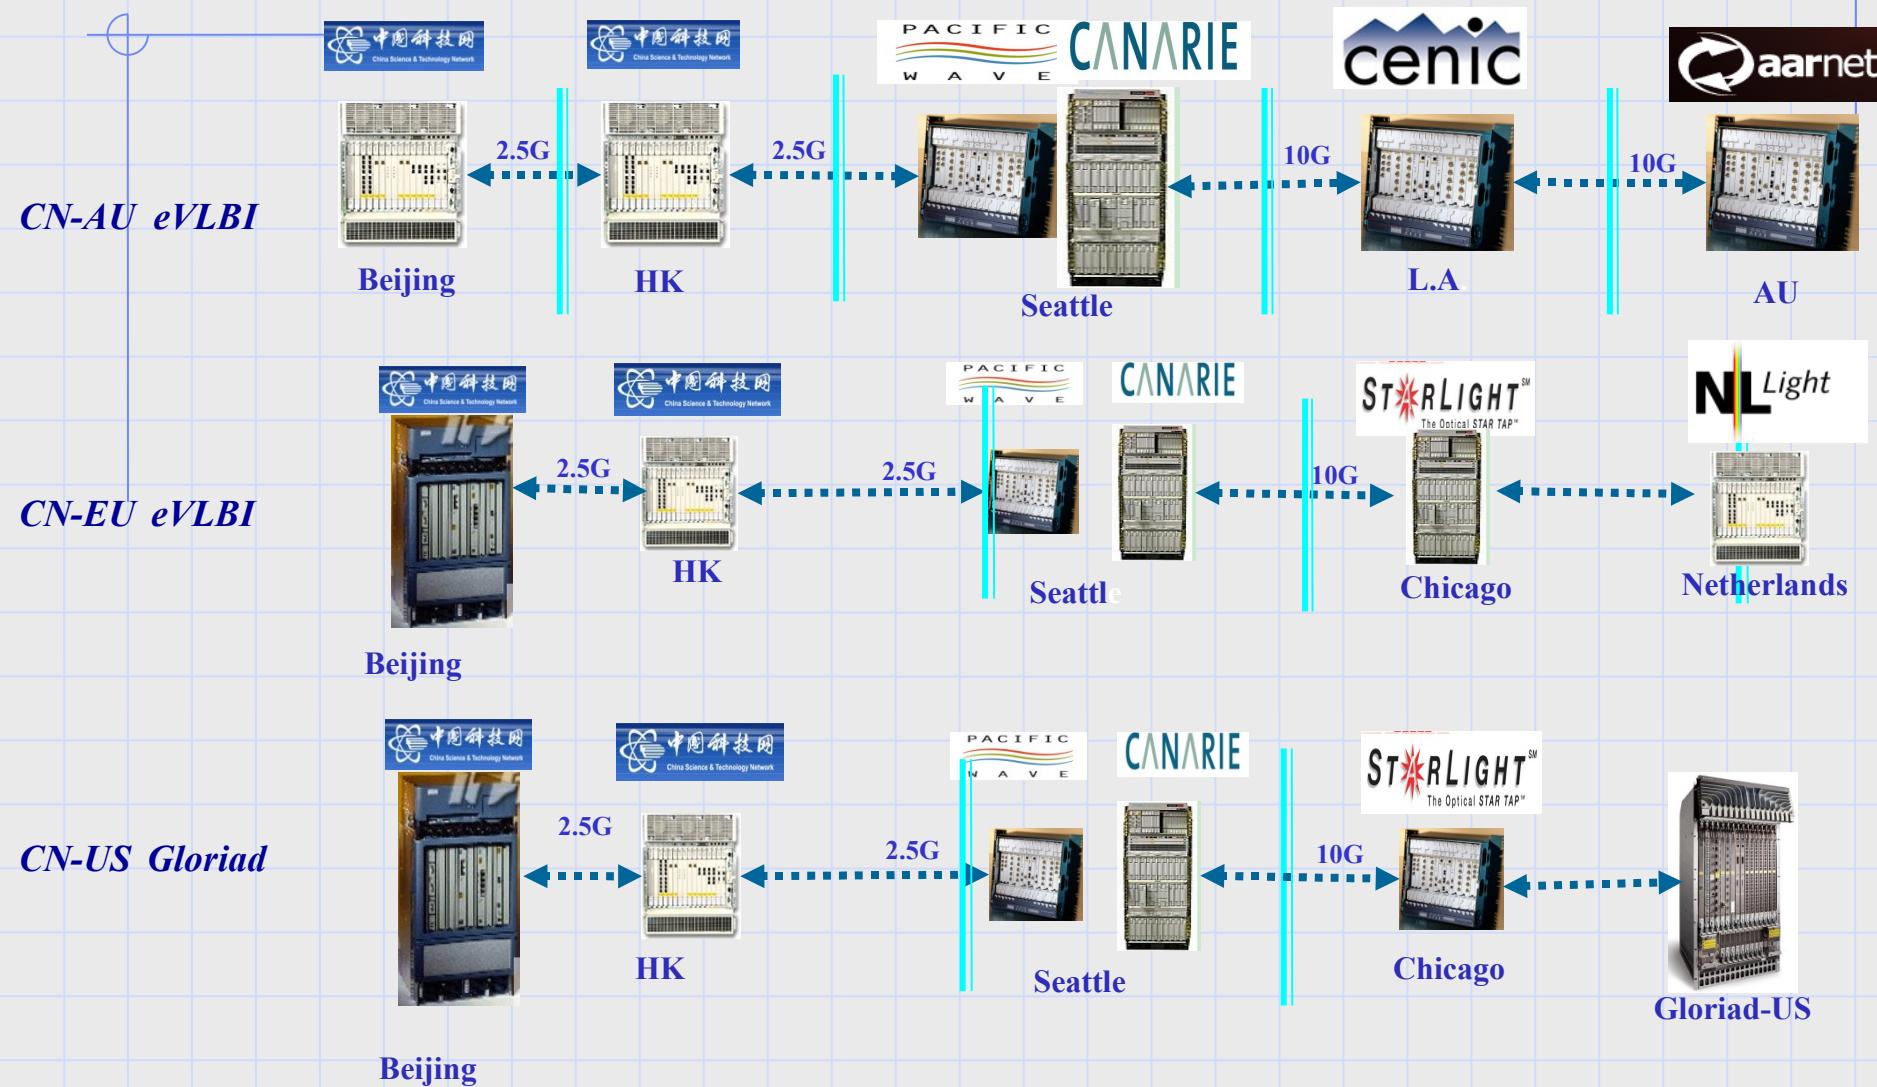

Image created by Paul Boven  
Satellite image: Blue Marble Net
